

Weatherproof Inner Liners Product Information

Bike Compatibility & Fitment

The Weatherproof Inner Liners are designed to seamlessly integrate with Solara Panniers, offering a precise fit for models including the BMW R1250GS, Honda Africa Twin, Honda NT1100, and Yamaha FJR1300. Their tailored dimensions ensure optimal space utilization and secure placement, making them an essential accessory for adventure riders seeking reliability and convenience.

Technical Specs & Load Limits

Crafted from high-strength waterproof fabric, the Weatherproof Inner Liners boast an impressive load capacity, capable of supporting up to 10kg of gear. With a volume capacity that complements the 37L/48L Solara panniers, these liners are engineered for adventure, maintaining structural integrity at speeds up to 130 km/h.

Step-by-Step Installation

Installing the Weatherproof Inner Liners involves a straightforward process. Begin by unpacking the liners and aligning them with the pannier interiors. No tools are required for insertion. For optimal performance, ensure the liners are fully expanded before loading. Secure in place by folding the liner edges over the pannier rims.

Weatherproofing & Maintenance

To maintain the Weatherproof Inner Liners' performance, regularly inspect the IP67 gasket seals for signs of wear. Clean the liners with a damp cloth and mild detergent, avoiding abrasive materials that can damage the waterproof fabric. Lubricate lock cylinders to ensure smooth operation and prevent corrosion.

Safety & Latch Operation

Featuring keyed-alike quick-release mechanics, the liners offer both convenience and security. Engage the locking mechanisms by aligning the key with the lock cylinder, ensuring a firm click to confirm secure latching. Regularly test the locks to maintain their reliability, especially in rugged conditions.
